

Pod ☕ Pack

Espresso Coffee made Easy
with the Original
EASY SERVING ESPRESSO
Paper Pod

What are coffee pods?

Pods are individual servings of fresh ground coffee. Each one contains an exact measurement of pre-tamped ground coffee which is enclosed in filter paper and sealed in an air-tight, oxygen free pouch.

To make an espresso, you simply remove the pod from the pouch and place it in the espresso machine's pod holder or group handle and pour.

Why use pods for espresso?

More and more people are choosing ESE Paper Pods because:

- No skill required
- They are easy to use
- No need for coffee grinders
- No mess as no dosing, tamping or emptying of coffee grounds
- Pods mean fresher decaffeinated coffee

ESE Pods are made from 100% fresh ground coffee

1 Remove pod from Individual pouch.

2 Place pod in group Handle and Connect to the group head.

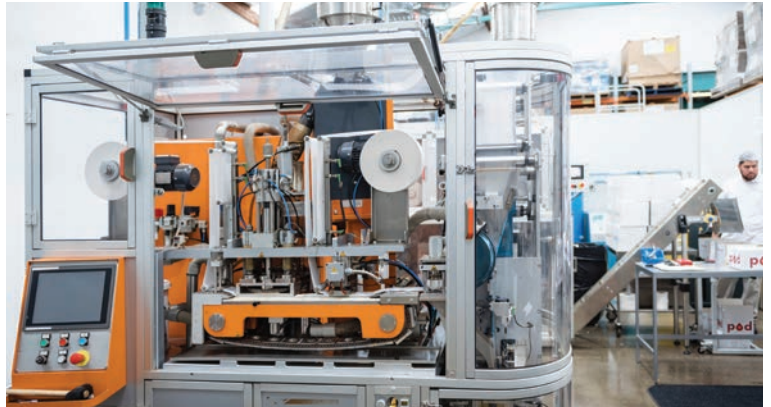

3 Press the dose button.

How pods are made

The Original ESE Paper pod is manufactured in a HACCP approved facility.

The pods are produced on equipment imported from Italy, the home of coffee and the ESE Pod.

Coffee beans are loaded into the hopper (*left*).

The beans are moved via suction into the grinder (*right*).

The coffee beans are ground (*left*).

The freshly ground coffee is held for less than 1 minute in the hopper (*right*).

The coffee is dosed and tamped between two pieces of permeable paper (*left*).

The newly made pod is sealed in a nitrogen flushed pouch (*right*).

The pouches are packed into boxes (*left*).

The boxes are stacked onto pallets for transportation (*right*).
